

## a unique partnership

The Australian Carbon Trust is a joint initiative of The National Trust of Australia (WA) and Your Corporation. Treemission is a program of the Australian Carbon Trust, which aims to reduce carbon dioxide levels in the atmosphere by facilitating the planting of trees.

The National Trust of Australia (WA) is a community-based heritage organisation that has more than 30 years' experience in the conservation and rehabilitation of natural landscapes. Through our BushBank and Covenanted Programs, we have already planted more than 200 hectares of unproductive land with native species of trees and shrubs.

## help us to do your bit

Help us to achieve a brighter future for our environment:

- Make a donation by completing the attached form. Your donation will facilitate the planting of trees to offset the production of carbon dioxide.
- Become a member of the Australian Carbon Trust. Individual and corporate memberships available; contact us to find out more.

## it's all about balance

Burning fossil fuels to power our cars, homes and offices results in the release of carbon dioxide into the atmosphere. Increased atmospheric levels of 'greenhouse gases', including carbon dioxide, are a major contributor to global warming.

Fortunately there is something that we can do to reduce the levels of carbon dioxide in our atmosphere, without having to resort to drastic lifestyle changes. The solution is simple: trees.

Trees absorb carbon dioxide from the atmosphere and store it, releasing oxygen as a product of photosynthesis. As well as reducing the causes of global warming, planting trees also has other positive environmental effects, such as reducing erosion and salinity.

The National Trust of Australia and Your Corporation are working together as The Australian Carbon Trust to plant native trees and shrubs on areas of unproductive land. Each donation to the Australian Carbon Trust allows us to plant more trees and make a real difference to the environment on both a local and global scale.

## a natural solution

The Australian Carbon Trust carefully selects appropriate native species for planting, to create a natural environment for native flora and fauna. Once planted, the trees are monitored and active management of pests and weeds is implemented to ensure their survival.

The Trust also chooses planting locations carefully, in order to achieve the greatest possible benefit to the local environment. Where possible, trees are planted in areas that are vulnerable to salinity and erosion, with the aim of preventing further degradation and restoring the landscape to its natural state.

The holistic approach of the treemission program and the continued management of the revegetated areas ensure that each dollar goes further in achieving positive environmental outcomes.
